Yes. If anyone is working downstairs I will let them know that you are coming. If not I'm easy to find. Enter main hatchery, go through 3rd door on left, go up stairs, first office on right.

Great. I assume we'll just go to the main office to meet you.

Still works for me. See you Monday.

Hi Malenna, I was just about to write. Yes, we're still planning to visit and plan to arrive around 10am and leave by 2pm. Does that still work for you? I'm interested in getting a general tour of the facility and operations as well as seeing the outfalls (probably the same tour you gave to Jill).

Are you still thinking about coming out next Monday (15th)?

On Fri, Apr 28, 2017 at 10:30 AM, Wu, Jennifer <Wu.Jennifer@epa.gov> wrote:

Hi Malenna,

I was wondering whether May 15 still works for you for us to visit the hatchery. I'm waiting to hear from Erin if that date will work for her, but I thought we should get it on the calendar as a placeholder.

Also, I'll plan on giving you a call next week to give you an update on where things are. We're working with Ecology to receive a draft 401 certification. As part of that, there have been some questions that have come up on toxics. Do you have data on any priority pollutants toxics monitoring at the hatchery? As far as I could see, LNFH has not been required to monitor for toxic priority pollutants, but just wanted to check in with you on that. It's possible that you or Travis gave some information to Jill, but we weren't able to find it readily. If there's other toxics monitoring I should be aware of, please let me know. I'm aware of information on formalin collected through EPA's study at the LNFH hatchery and that it showed that formalin use from LNFH wasn't adversely impacting downstream waters.

Thanks, and if you have questions, please feel free to call or email me.
